

2019 IEEE 60th Annual Symposium on Foundations of Computer Science (FOCS) **FOCS 2019**

Table of Contents

| | |
|---|------|
| Preface | xiv |
| FOCS 2019 Organizing Committee and Sponsors | xv |
| FOCS 2019 Program Committee | xvi |
| FOCS 2019 External Reviewers | xvii |
| FOCS 2019 Awards | xxi |

Session 1A

| | |
|--|----|
| Tight Bounds for Online Edge Coloring | 1 |
| <i>Ilan Reuven Cohen (CWI), Binghui Peng (Columbia University), and David Wajc (CMU)</i> | |
| Online Matching with General Arrivals | 26 |
| <i>Buddhima Gamlath (EPFL), Michael Kapralov (EPFL), Andreas Maggiori (EPFL), Ola Svensson (EPFL), and David Wajc (CMU)</i> | |
| Polylogarithmic Guarantees for Generalized Reordering Buffer Management | 38 |
| <i>Matthias Englert (University of Warwick), Harald Räcke (Technical University of Munich), and Richard Stotz (Technical University of Munich)</i> | |
| General Framework for Metric Optimization Problems with Delay or with Deadlines | 60 |
| <i>Yossi Azar (Tel Aviv University) and Noam Touitou (Tel Aviv University)</i> | |

Session 1B

| | |
|---|----|
| How to Use Heuristics for Differential Privacy | 72 |
| <i>Seth Neel (University of Pennsylvania), Aaron Roth (University of Pennsylvania), and Zhiwei Steven Wu (University of Minnesota)</i> | |
| The Role of Interactivity in Local Differential Privacy | 94 |
| <i>Matthew Joseph (University of Pennsylvania), Jieming Mao (Google Research New York), Seth Neel (University of Pennsylvania), and Aaron Roth (University of Pennsylvania)</i> | |

| | |
|---|-----|
| Learning from Outcomes: Evidence-Based Rankings | 106 |
| <i>Cynthia Dwork (Harvard University), Michael P. Kim (Stanford University), Omer Reingold (Stanford University), Guy N. Rothblum (Weizmann Institute of Science), and Gal Yona (Weizmann Institute of Science)</i> | |
| Collaborative Learning with Limited Interaction: Tight Bounds for Distributed Exploration in Multi-armed Bandits | 126 |
| <i>Chao Tao (Indiana University), Qin Zhang (Indiana University), and Yuan Zhou (Indiana University and University of Illinois at Urbana-Champaign)</i> | |

Session 2A

| | |
|---|-----|
| Derandomization from Algebraic Hardness: Treading the Borders | 147 |
| <i>Zeyu Guo (IIT Kanpur), Mrinal Kumar (IIT Bombay), Ramprasad Satharishi (TIFR, Mumbai), and Noam Solomon (MIT)</i> | |
| Expander Graphs – Both Local and Global | 158 |
| <i>Michael Chapman (The Hebrew University of Jerusalem, Israel), Nati Linial (The Hebrew University of Jerusalem, Israel), and Yuval Peled (Courant Institute of Mathematical Sciences, NYU, USA)</i> | |
| Sampling Graphs without Forbidden Subgraphs and Unbalanced Expanders with Negligible Error | 171 |
| <i>Benny Applebaum (Tel Aviv University, Israel) and Eliran Kachlon (Tel Aviv University, Israel)</i> | |
| Approximating Constraint Satisfaction Problems on High-Dimensional Expanders | 180 |
| <i>Vedat Levi Alev (University of Waterloo, Canada), Fernando Granha Jeronimo (University of Chicago, USA), and Madhur Tulsiani (Toyota Technological Institute Chicago, USA)</i> | |

Session 2B

| | |
|--|-----|
| Adversarial Bandits with Knapsacks | 202 |
| <i>Nicole Immorlica (Microsoft Research), Karthik Abinav Sankararaman (Facebook/University of Maryland College Park), Robert Schapire (Microsoft Research), and Aleksandrs Slivkins (Microsoft Research)</i> | |
| Approximation Schemes for a Unit-Demand Buyer with Independent Items via Symmetries | 220 |
| <i>Pravesh Kothari (Carnegie Mellon University), Sahil Singla (Princeton University), Divyarthi Mohan (Princeton University), Ariel Schwartzman (Princeton University), and S. Matthew Weinberg (Princeton University)</i> | |
| Improved Truthful Mechanisms for Combinatorial Auctions with Submodular Bidders | 233 |
| <i>Sepehr Assadi (Rutgers University) and Sahil Singla (Princeton University and Institute for Advanced Study)</i> | |
| Settling the Communication Complexity of Combinatorial Auctions with Two Subadditive Buyers | 249 |
| <i>Tomer Ezra (Tel Aviv University), Michal Feldman (Tel Aviv University), Eric Neyman (Columbia University), Inbal Talgam-Cohen (Technion), and Matt Weinberg (Princeton University)</i> | |

Session 3A

| | |
|--|-----|
| Reed-Muller Codes Polarize | 273 |
| <i>Emmanuel Abbe (EPFL (Switzerland) and Princeton University (United States)) and Min Ye (Princeton University, United States)</i> | |
| SETH-Hardness of Coding Problems | 287 |
| <i>Noah Stephens-Davidowitz (Massachusetts Institute of Technology) and Vinod Vaikuntanathan (Massachusetts Institute of Technology)</i> | |
| Quasilinear Time List-Decodable Codes for Space Bounded Channels | 302 |
| <i>Jad Silbak (Tel Aviv University), Swastik Kopparty (Rutgers University), and Ronen Shaltiel (University of Haifa)</i> | |
| Optimal Document Exchange and New Codes for Insertions and Deletions | 334 |
| <i>Bernhard Haeupler (Carnegie Mellon University)</i> | |
| Radio Network Coding Requires Logarithmic Overhead | 348 |
| <i>Klim Efremenko (Ben-Gurion University), Gillat Kol (Princeton University), and Raghuvansh Saxena (Princeton University)</i> | |

Session 3B

| | |
|---|-----|
| Fully Dynamic Maximal Independent Set in Expected Poly-Log Update Time | 370 |
| <i>Shiri Chechik (Tel Aviv University) and Tianyi Zhang (Tsinghua University)</i> | |
| Fully Dynamic Maximal Independent Set with Polylogarithmic Update Time | 382 |
| <i>Soheil Behnezhad (University of Maryland), Mahsa Derakhshan (University of Maryland), MohammadTaghi Hajiaghayi (University of Maryland), Cliff Stein (Columbia University), and Madhu Sudan (Harvard University)</i> | |
| A New Deterministic Algorithm for Dynamic Set Cover | 406 |
| <i>Sayan Bhattacharya (University of Warwick), Monika Henzinger (University of Vienna), and Danupon Nanongkai (KTH Royal Institute of Technology)</i> | |
| Sensitive Distance and Reachability Oracles for Large Batch Updates | 424 |
| <i>Jan van den Brand (KTH Royal Institute of Technology) and Thatchaphol Saranurak (Toyota Technological Institute at Chicago)</i> | |
| Dynamic Approximate Shortest Paths and Beyond: Subquadratic and Worst-Case Update Time | 436 |
| <i>Jan van den Brand (KTH Royal Institute of Technology) and Danupon Nanongkai (KTH Royal Institute of Technology)</i> | |
| Dynamic Matrix Inverse: Improved Algorithms and Matching Conditional Lower Bounds | 456 |
| <i>Jan van den Brand (KTH Royal Institute of Technology), Danupon Nanongkai (KTH Royal Institute of Technology), and Thatchaphol Saranurak (Toyota Technological Institute at Chicago)</i> | |

Session 4

| | |
|--|-----|
| Lower Bounds for Maximal Matchings and Maximal Independent Sets | 481 |
| <i>Alkida Balliu (Aalto University), Sebastian Brandt (ETH Zurich), Juho Hirvonen (Aalto University), Dennis Olivetti (Aalto University), Mikaël Rabie (Aalto University and LIP6 - Sorbonne Université), and Jukka Suomela (Aalto University)</i> | |
| Automating Resolution is NP-Hard | 498 |
| <i>Albert Atserias (Universitat Politècnica de Catalunya) and Moritz Müller (Universitat Politècnica de Catalunya)</i> | |
| NEEXP is Contained in MIP* | 510 |
| <i>Anand Natarajan (California Institute of Technology) and John Wright (California Institute of Technology)</i> | |

Session 5A

| | |
|---|-----|
| Inapproximability of Clustering in L_p Metrics | 519 |
| <i>Vincent Cohen-Addad (Sorbonne University) and Karthik C. S. (Tel Aviv University)</i> | |
| Near-Linear Time Approximations Schemes for Clustering in Doubling Metrics | 540 |
| <i>David Saulpic (Sorbonne Université, CNRS, LIP6 and ENS Paris), Vincent Cohen-Addad (Sorbonne Université, CNRS, LIP6), and Andreas Feldmann (Charles University in Prague)</i> | |
| A Polynomial-Time Approximation Scheme for Facility Location on Planar Graphs | 560 |
| <i>Vincent Cohen-Addad (Sorbonne Université, CNRS, Laboratoire d'informatique de Paris 6, LIP6), Michał Pilipczuk (University of Warsaw), and Marcin Pilipczuk (University of Warsaw)</i> | |
| Smoothed Analysis in Unsupervised Learning via Decoupling | 582 |
| <i>Aditya Bhaskara (University of Utah), Aidao Chen (Northwestern University), Aidan Perreault (Northwestern University), and Aravindan Vijayaraghavan (Northwestern University)</i> | |

Session 5B

| | |
|---|-----|
| Perfect Zero Knowledge for Quantum Multiprover Interactive Proofs | 611 |
| <i>Alex Bredariol Grilo (CWI and QuSoft), William Slofstra (University of Waterloo), and Henry Yuen (University of Toronto)</i> | |
| Leakage-Resilient Secret Sharing Against Colluding Parties | 636 |
| <i>Ashutosh Kumar (UCLA), Raghu Meka (UCLA), and Amit Sahai (UCLA)</i> | |
| Laconic Conditional Disclosure of Secrets and Applications | 661 |
| <i>Nico Döttling (CISPA Helmholtz Center for Information Security, Germany), Sanjam Garg (University of California, Berkeley), Vipul Goyal (Carnegie Mellon University), and Giulio Malavolta (Simons Institute for the Theory of Computing, USA)</i> | |
| Non-Malleable Commitments using Goldreich-Levin List Decoding | 686 |
| <i>Vipul Goyal (Carnegie Mellon University) and Silas Richelson (UC Riverside)</i> | |

Session 6A

| | |
|---|-----|
| Distributed Local Approximation Algorithms for Maximum Matching in Graphs and Hypergraphs | 700 |
| <i>David G. Harris (University of Maryland)</i> | |
| Beyond the Lovász Local Lemma: Point to Set Correlations and Their Algorithmic Applications | 725 |
| <i>Dimitris Achlioptas (University of California Santa Cruz), Fotis Iliopoulos (University of California Berkeley), and Alistair Sinclair (University of California Berkeley)</i> | |
| Beyond Trace Reconstruction: Population Recovery from the Deletion Channel | 745 |
| <i>Frank Ban (UC Berkeley), Xi Chen (Columbia University), Adam Freilich (Columbia University), Rocco A. Servedio (Columbia University), and Sandip Sinha (Columbia University)</i> | |
| Multi-resolution Hashing for Fast Pairwise Summations | 769 |
| <i>Moses Charikar (Stanford University) and Paris Siminelakis (Stanford University)</i> | |

Session 6B

| | |
|---|-----|
| Fast Generalized DFTs for all Finite Groups | 793 |
| <i>Chris Umans (California Institute of Technology)</i> | |
| Waring Rank, Parameterized and Exact Algorithms | 806 |
| <i>Kevin Pratt (Carnegie Mellon University)</i> | |
| More Barriers for Rank Methods, via a "numeric to Symbolic" Transfer | 824 |
| <i>Ankit Garg (Microsoft Research India), Visu Makam (Institute for Advanced Study), Rafael Oliveira (University of Toronto), and Avi Wigderson (Institute for Advanced Study)</i> | |
| Towards a Theory of Non-Commutative Optimization: Geodesic 1st and 2nd Order Methods for Moment Maps and Polytopes | 845 |
| <i>Peter Bürgisser (Technische Universität Berlin), Cole Franks (Rutgers University, New Brunswick), Ankit Garg (Microsoft Research India), Rafael Oliveira (University of Toronto), Michael Walter (University of Amsterdam), and Avi Wigderson (Institute for Advanced Study)</i> | |

Session 7A

| | |
|---|-----|
| Planar Graphs have Bounded Queue-Number | 862 |
| <i>Vida Dujmovi (University of Ottawa), Gwenaél Joret (Université libre de Bruxelles), Piotr Micek (Jagiellonian University), Pat Morin (Carleton University), Torsten Ueckerdt (Karlsruhe Institute of Technology), and David Wood (Monash University)</i> | |
| Parametric Shortest Paths in Planar Graphs | 876 |
| <i>Kshitij Gajjar (Tata Institute of Fundamental Research, India) and Jaikumar Radhakrishnan (Tata Institute of Fundamental Research, India)</i> | |

| | |
|--|-----|
| Random k-out Subgraph Leaves only $O(n/k)$ Inter-Component Edges | 896 |
| <i>Jacob Holm (University of Copenhagen), Valerie King (University of Victoria), Mikkel Thorup (University of Copenhagen), Or Zamir (Tel Aviv University), and Uri Zwick (Tel Aviv University)</i> | |
| New Notions and Constructions of Sparsification for Graphs and Hypergraphs | 910 |
| <i>Nikhil Bansal (CWI and TU Eindhoven), Ola Svensson (EPFL), and Luca Trevisan (Bocconi University)</i> | |
| Linear-Time and Efficient Distributed Algorithms for List Coloring Graphs on Surfaces | 929 |
| <i>Luke Postle (University of Waterloo)</i> | |

Session 7B

| | |
|---|------|
| A Quantum Query Complexity Trichotomy for Regular Languages | 942 |
| <i>Scott Aaronson (UT Austin), Daniel Grier (MIT), and Luke Schaeffer (MIT)</i> | |
| Exponential Separation between Quantum Communication and Logarithm of Approximate Rank | 966 |
| <i>Makrand Sinha (CWI, The Netherlands) and Ronald de Wolf (QuSoft, CWI and University of Amsterdam)</i> | |
| Quantum Log-Approximate-Rank Conjecture is Also False | 982 |
| <i>Anurag Anshu (University of Waterloo and Perimeter Institute, Canada), Naresh Goud Boddu (National University of Singapore), and Dave Touchette (University of Waterloo, Perimeter Institute and Universite de Sherbrooke, Canada)</i> | |
| Quantum Advantage with Noisy Shallow Circuits in 3D | 995 |
| <i>Sergey Bravyi (IBM T. J. Watson Research Center), David Gosset (Department of Combinatorics and Optimization and Institute for Quantum Computing, University of Waterloo), Robert Koenig (Institute for Advanced Study, Zentrum Mathematik, Technical University of Munich), and Marco Tomamichel (Centre for Quantum Software and Information, University of Technology Sydney)</i> | |
| Stoquastic PCP vs. Randomness | 1000 |
| <i>Dorit Aharonov (The Hebrew University of Jerusalem, Israel) and Alex Bredariol Grilo (CWI and QuSoft, The Netherlands)</i> | |
| Computationally-Secure and Composable Remote State Preparation | 1024 |
| <i>Alexandru Gheorghiu (California Institute of Technology) and Thomas Vidick (California Institute of Technology)</i> | |

Session 8

| | |
|--|------|
| Efficient Construction of Rigid Matrices Using an NP Oracle | 1034 |
| <i>Josh Alman (MIT) and Lijie Chen (MIT)</i> | |
| Faster Minimum k-cut of a Simple Graph | 1056 |
| <i>Jason Li (Carnegie Mellon University)</i> | |
| Truly Optimal Euclidean Spanners | 1078 |
| <i>Hung Le (University of Victoria) and Shay Solomon (Tel Aviv University)</i> | |

Session 9A

| | |
|--|------|
| Sublinear Algorithms for Gap Edit Distance | 1101 |
| <i>Elazar Goldenberg (The Academic College of Tel Aviv-Yaffo), Robert Krauthgamer (Weizmann Institute of Science), and Barna Saha (University of California Berkeley)</i> | |
| Approximation Algorithms for LCS and LIS with Truly Improved Running Times | 1121 |
| <i>Aviad Rubinfeld (Stanford University), Saeed Seddighin (Harvard University), Zhao Song (Simons Institute for the Theory of Computing, USA), and Xiaorui Sun (University of Illinois at Chicago)</i> | |
| Faster Matroid Intersection | 1146 |
| <i>Deeparnab Chakrabarty (Dartmouth College), Yin Tat Lee (University of Washington and Microsoft Research), Aaron Sidford (Stanford University), Sahil Singla (Princeton University and Institute for Advanced Study), and Sam Chiu-wai Wong (Microsoft Research)</i> | |
| Balancing Straight-Line Programs | 1169 |
| <i>Moses Ganardi (Universität Siegen), Artur Je (University of Wrocław), and Markus Lohrey (Universität Siegen)</i> | |

Session 9B

| | |
|---|------|
| Spectral Analysis of Matrix Scaling and Operator Scaling | 1184 |
| <i>Tsz Chiu Kwok (Shanghai University of Finance and Economics), Lap Chi Lau (University of Waterloo), and Akshay Ramachandran (University of Waterloo)</i> | |
| Noise Sensitivity on the p -Biased Hypercube | 1205 |
| <i>Noam Lifshitz (Einstein Institute of Mathematics, Hebrew University of Jerusalem) and Dor Minzer (Institute for Advanced Study, Princeton)</i> | |
| The Complexity of 3-Colouring H -Colourable Graphs | 1227 |
| <i>Andrei Krokhin (Durham University) and Jakub Opršal (Durham University)</i> | |
| Hardness Magnification for all Sparse NP Languages | 1240 |
| <i>Lijie Chen (MIT), Ce Jin (Tsinghua University), and R. Ryan Williams (MIT)</i> | |

Session 10A

| | |
|---|------|
| The Average-Case Complexity of Counting Cliques in Erds-Rényi Hypergraphs | 1256 |
| <i>Enric Boix-Adserà (MIT), Matthew Brennan (MIT), and Guy Bresler (MIT)</i> | |
| Non-deterministic Quasi-Polynomial Time is Average-Case Hard for ACC Circuits | 1281 |
| <i>Lijie Chen (Massachusetts Institute of Technology)</i> | |
| Why are Proof Complexity Lower Bounds Hard? | 1305 |
| <i>Jan Pich (University of Oxford) and Rahul Santhanam (University of Oxford)</i> | |

| | |
|---|------|
| Polynomial Calculus Space and Resolution Width | 1325 |
| <i>Nicola Galesi (Sapienza University Rome), Leszek Kolodziejczyk</i> <i>(University of Warsaw), and Neil Thapen (Czech Academy of Sciences)</i> | |

Session 10B

| | |
|--|------|
| Faster Polytope Rounding, Sampling, and Volume Computation via a Sub-Linear Ball Walk | 1338 |
| <i>Oren Mangoubi (Worcester Polytechnic Institute, USA) and Nisheeth K.</i> <i>Vishnoi (Yale University)</i> | |
| Modified log-Sobolev Inequalities for Strongly Log-Concave Distributions | 1358 |
| <i>Mary Cryan (University of Edinburgh), Heng Guo (University of</i> <i>Edinburgh), and Giorgos Mousa (University of Edinburgh)</i> | |
| Fast Uniform Generation of Random Graphs with Given Degree Sequences | 1371 |
| <i>Andrii Arman (Monash University), Pu Gao (University of Waterloo), and</i> <i>Nicholas Wormald (Monash University)</i> | |
| A Deterministic Algorithm for Counting Colorings with 2-Delta Colors | 1380 |
| <i>Jingcheng Liu (University of California, Berkeley), Alistair Sinclair</i> <i>(University of California, Berkeley), and Piyush Srivastava (Tata</i> <i>Institute of Fundamental Research, India)</i> | |

Session 11A

| | |
|--|------|
| Breaking of 1RSB in Random Regular MAX-NAE-SAT | 1405 |
| <i>Zsolt Bartha (University of California at Berkeley), Nike Sun</i> <i>(Massachusetts Institute of Technology), and Yumeng Zhang (Stanford</i> <i>University)</i> | |
| Optimization of the Sherrington-Kirkpatrick Hamiltonian | 1417 |
| <i>Andrea Montanari (Stanford University)</i> | |
| A Tight Analysis of Bethe Approximation for Permanent | 1434 |
| <i>Nima Anari (Stanford University) and Alireza Rezaei (University of</i> <i>Washington)</i> | |
| The Kikuchi Hierarchy and Tensor PCA | 1446 |
| <i>Alexander S. Wein (Courant Institute, New York University, USA), Ahmed</i> <i>El Alaoui (Stanford University), and Cristopher Moore (Santa Fe</i> <i>Institute)</i> | |

Session 11B

| | |
|---|------|
| Finding Monotone Patterns in Sublinear Time | 1469 |
| <i>Omri Ben-Eliezer (Tel Aviv University), Clément Canonne (Stanford</i> <i>University), Shoham Letzter (ETH Institute for Theoretical Studies),</i> <i>and Erik Waingarten (Columbia University)</i> | |
| Agreement Testing Theorems on Layered Set Systems | 1495 |
| <i>Yotam Dikstein (Weizmann Institute of Science) and Irit Dinur</i> <i>(Weizmann Institute of Science)</i> | |

| | |
|---|------|
| A Characterization of Graph Properties Testable for General Planar Graphs with one-Sided Error (It's all About Forbidden Subgraphs) | 1525 |
| <i>Artur Czumaj (University of Warwick) and Christian Sohler (TU Dortmund)</i> | |
| Junta Correlation is Testable | 1549 |
| <i>Anindya De (University of Pennsylvania), Elchanan Mossel (MIT), and Joe Neeman (UT Austin)</i> | |

Session 12A

| | |
|--|------|
| An Improved Lower Bound for Sparse Reconstruction from Subsampled Hadamard Matrices | 1564 |
| <i>Jaroslav Blasiok (Harvard University), Patrick Lopatto (Harvard University), Kyle Luh (Harvard University), Jake Marcinek (Harvard University), and Shravas Rao (New York University)</i> | |
| (Nearly) Sample-Optimal Sparse Fourier Transform in Any Dimension; RIPless and Filterless | 1568 |
| <i>Vasileios Nakos (Harvard University), Zhao Song (Harvard University & UT-Austin), and Zhengyu Wang (Harvard University)</i> | |
| Efficient Truncated Statistics with Unknown Truncation | 1578 |
| <i>Vasilis Kontonis (University of Wisconsin-Madison), Christos Tzamos (University of Wisconsin-Madison), and Manolis Zampetakis (MIT)</i> | |
| Residual Based Sampling for Online Low Rank Approximation | 1596 |
| <i>Aditya Bhaskara (University of Utah), Silvio Lattanzi (Google Research Zurich), Sergei Vassilvitskii (Google Research NYC), and Morteza Zadimoghaddam (Google Research Zurich)</i> | |

Session 12B

| | |
|---|------|
| Near-Optimal Massively Parallel Graph Connectivity | 1615 |
| <i>Soheil Behnezhad (University of Maryland), Laxman Dhulipala (Carnegie Mellon University), Hossein Esfandiari (Google Research), Jakub Łcki (Google Research), and Vahab Mirrokni (Google Research)</i> | |
| Exponentially Faster Massively Parallel Maximal Matching | 1637 |
| <i>Soheil Behnezhad (University of Maryland), MohammadTaghi Hajiaghayi (University of Maryland), and David G. Harris (University of Maryland)</i> | |
| Conditional Hardness Results for Massively Parallel Computation from Distributed Lower Bounds | 1650 |
| <i>Mohsen Ghaffari (ETH Zurich), Fabian Kuhn (University of Freiburg), and Jara Uitto (Aalto University)</i> | |
| Parallel Reachability in Almost Linear Work and Square Root Depth | 1664 |
| <i>Yang P. Liu (Stanford University), Arun Jambulapati (Stanford University), and Aaron Sidford (Stanford University)</i> | |

| | |
|--------------------|------|
| Author Index | 1687 |
|--------------------|------|
